DESCRIPTION OF TARGET MARKET

TMD indicator key

The Consumer Attributes for which the product is likely to be appropriate have been assessed using a red/amber/green rating methodology with appropriate colour coding:

In target market
Potentially in target market
Not considered in target market

In the tables following, column 1, Consumer Attributes, indicates a description of the likely objectives, financial situation and needs of the class of consumers that are considering this product. Column 2, TMD indicator, indicates whether a consumer meeting the attribute in column one is likely to be in the target market for this product.

Generally, a consumer is unlikely to be in the target market for the product if:

- one or more of their Consumer Attributes correspond to a **red** rating, or
- three or more of their Consumer Attributes correspond to an **amber** rating.

Investment products and diversification

A consumer (or class of consumer) may intend to hold a product as part of a diversified portfolio (typically with an intended product use of satellite/small allocation or core component). In such circumstances, the product should be assessed against the consumer's attributes for the relevant portion of the portfolio, rather than the consumer's portfolio as a whole.

In making this assessment, distributors should consider all features of a product (including its key attributes).
